Análisis Clínico

卷之三

Die beiden Verfahren der modernen Anthropometrie sind
die Körperfotografie und die 3D-Photogrammetrie. Beide sind
Festnahmen von Körpermaßen, 2D-fotogrammetrische Methoden
haben die Nachteile, dass sie aufgrund der Perspektive
Längenmaße nicht korrekt messen können.
Moderne 3D-Photogrammetrie ist dagegen
unabhängig von der Perspektive.

In the interpretation of the results it is important to remember that the test items in the present study were not drawn from a single test. Consequently, care must be taken to interpret the results. The test items used in this study were not representative of the whole test and hence the generalization of the findings must be done with care.
